

## NOTIFICATION CRITERIA

---

### ROADWORKS

The A22 has drawn up NOTIFICATION CRITERIA for the roadworks/building sites shown in the dynamic “Roadworks” box. This involves notifications relating to:

1. Ongoing roadworks, i.e. roadworks currently underway on a given route.
2. Roadworks as defined by ordinance, i.e. roadworks which will be ongoing for at least 48 hours; in every event all diversions affecting traffic lanes.
3. Closing of any sections, lanes, intersections, toll booths and service stations, in accordance with the given ordinance. Accidents or emergencies will be displayed in the “Traffic Situation” box.

These notices will be displayed by road section:

- North section from Brenner to Trento Centre from km 0 to km 136
- Central section from Trento Centre to North Verona from km 136 to km 226
- South section from North Verona to A1/Modena intersection from km 226 to km 314

You may (if you register for the Newsletter) receive notifications on sections in which you are interested or, optionally, on all 3 sections of the entire A22 from Brenner to Modena.

### COMPLEX MAINTENANCE WORK AND PLANNED ROADWORKS

Complex maintenance work (i.e. medium to long-term roadworks where two lanes per direction still remain opened) and planned roadworks (planned, but not yet underway) will be displayed in separate links (see “Complex Maintenance Work” and “Planned Roadworks”). You may check on these kinds of roadworks online, but they will not be included in the Newsletter.

### NOTE

The A22 reminds you that in extraordinary or especially urgent cases the company will take measures to restore the safety and usability of the section in question. In such cases, no notice will be given of works (unforeseen event) and their duration – depending on the cause – is not foreseeable. Weather conditions or force majeure may also change the estimated duration of roadworks.
